

Let AI accelerate redaction

Quicken your deal with the industry's most advanced un/redaction app – now with artificial intelligence. Go live with buyers in half the time and unredact in seconds vs. stand-alone redaction tools. The time savings are huge. Complexity is reduced, your sanity saved. It's redaction as it should be.

Redaction starts as your deal starts

- Artificial intelligence finds data types automatically upon file upload.
- Datasite Redaction AI is fully integrated within your VDR saving you hours and days vs. tools that sit outside the dataroom.
- Redact within individual files or across filerooms – something other tools cannot provide

80%

Less time vs. manual redaction

Easy management and control

- Secure your information right down to the word to meet global regulations.
- Allow other deal team members to redact simultaneously and get through redaction faster.
- Track your redaction program progress with advanced analytics.

50%

Less time vs. stand-alone tools

Keep deals moving

- Datasite is a fraction of the cost vs. using a service provider.
- Unredact in seconds when exclusive buyers emerge. Should the deal collapse, re-redact quickly to re-start due diligence.
- Redaction AI now takes just half the time vs. standalone tools. Spend more time dealmaking and less time un/redacting.

Ready when you are

Start accelerated redacting when you're first setting up your project with Datasite Diligence, or later as an add-on. And, once you've got Redaction AI, you'll be able to do all this:

- **Select data types for AI pattern recognition** | Let Redaction AI know which data types - personal/ company names, geo/email addresses, phone numbers and currencies - you want redacted, and the system finds them.

- **Start redaction upon file upload** | Redaction AI is integrated within Datasite Diligence, so you manage your indexing and permissions all in one place. Then as you upload files, potential redactions are marked automatically.

- **Automate redaction of select terms** | You can also create a list of specific words and phrases you want redacted, and automation marks are occurrences for redaction.

- **Mark images, logos - even handwritten notes for redaction** | Use a special area tool to select images, and the system will find each instance and mark for redaction.

- **Tag redactions by reasons** | Each type of redaction mark can be tagged with a reason, such as strategic, commercial, privacy regulation compliance, etc. So when an exclusive buyer emerges and needs to see commercially redacted content, you can unredact in seconds.

- **Stage redacted results** | Even though marking is fast and automated, you verify all system generated markings..

- **Manage overall project redaction** | Redaction analytics illustrates volumes of documents redacted, top redactors, and team progress. Schedule arrival times for reporting.
